

Speed the growth and performance of your business with the

ACCELERATE YOUR PRODUCTIVITY

reliable, high-performance Borland® Enterprise Server, Team Edition

Borland® Enterprise Server, Team Edition is an affordable and complete solution for J2EE,[™] ideal for small- and medium-sized businesses. It is designed to be one of the most reliable, robust, and high-performance application servers for J2EE, Web Services, and Web applications. A high-quality, certified implementation of the J2EE 1.3 standard, Team Edition provides the productivity and ease of use required by modern businesses. Tight integration with Borland JBuilder,[®] the leading Java[™] development solution, supports efficient, seamless development and deployment cycles for enterprise-class applications for J2EE.

Speed time-to-market with a complete e-business infrastructure solution

For the small- and medium-sized business it is imperative that e-business infrastructure be easily assembled and integrated in order to deliver applications to market quickly. Borland Enterprise Server, Team Edition delivers a powerful J2EE application server, Web server, Web container, Web Services engine, database, and management tools, tightly integrated in a single product. Deploy Web applications on an integrated platform. Create dynamic content using JSP and servlets hosted by the Borland Web Container. Integrate any existing legacy and packaged application based on open technologies and standards. Manage the deployed applications with an integrated management console.

Simplify the complexity of deploying and managing e-business applications

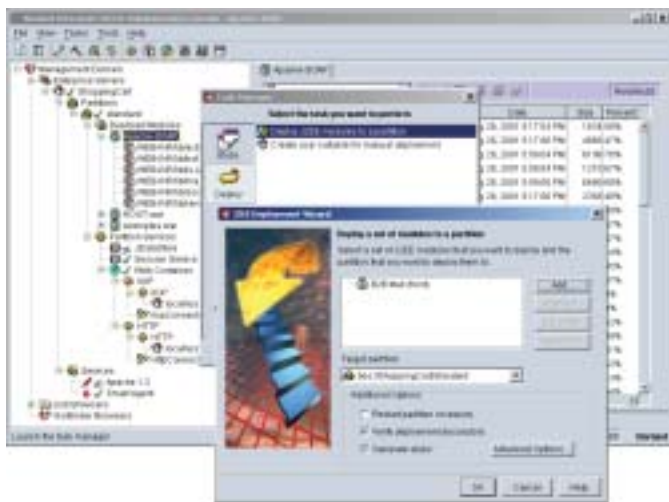

Borland Enterprise Server, Team Edition simplifies the often overly complex task of installing, deploying, and managing e-business applications, particularly where IT support may not always be readily available. With Team Edition, installation is quicker and simpler, assisted by a graphical interface and wizards. Efficiently deploy and run applications and J2EE platform services within the Team Edition environment with integrated, intuitive tools and utilities. Management tools provide business users with an intuitive paradigm for deploying and monitoring the availability of your application's components. Team Edition

KEY BENEFITS

- Speed time-to-market with a complete e-business infrastructure solution
- Simplify the complexity of deploying and managing e-business applications
- Maximize performance and reliability without extra expense
- Reduce the time and cost of integrating .NET applications into your J2EE environment
- Enhance deployment performance with the included Borland JDataStore database

"No other products came close to Borland Enterprise Server in terms of performance, scalability, and other core assets an application server should offer."

Dr. M.A. Kebtachi, CTO and Chairman, Savvion Software

Manage deployed systems more easily and deploy new J2EE applications instantly with the Borland Management Console.

allows you to maintain the quality of service that you need from your business-critical applications ensuring that application or system failures do not affect your users.

Maximize performance and reliability without extra expense

Borland Enterprise Server, Team Edition is designed to meet the performance and scalability requirements of small- and medium-sized businesses or departmental or team deployments within larger enterprises. At a very affordable price, Team Edition gives you the tools to maximize performance and reliability while dramatically lowering the hardware and software costs normally associated with deploying J2EE applications. With Team Edition, you get a complete solution at an ideal price-to-performance ratio. As your business grows, you can seamlessly serve increased application demand by upgrading Team Edition to Borland® Enterprise Server, AppServer™ Edition.

Reduce the time and cost of integrating .NET applications into your J2EE environment

Borland Enterprise Server, Team Edition includes Borland Janeva,™ enabling seamless, high-performance interoperability between Microsoft® .NET client-side applications and Team Edition server-side deployments. Janeva is ideal for small- to medium-sized enterprises with limited time, budget, and expertise - it requires no extra J2EE development work on the server side to enable connectivity, and as a result, you can save valuable development resources for your core competencies that can be focused on gaining competitive advantage. In addition, Janeva requires no other infrastructure components to be introduced into the server environment, reducing the complexity and increasing the manageability of your IT environment. With Janeva, your .NET developers aren't required to know or learn J2EE or CORBA technology, speeding your time to market and saving training expenses and time.

Enhance deployment performance with the included Borland JDataStore database

Tightly integrated with Team Edition, Borland JDataStore™ delivers all the database power necessary to support business-critical applications for the small and medium enterprise. A fast, versatile Java database, JDataStore requires virtually no maintenance, and delivers the performance, scalability, and synchronization capabilities of a full-power J2EE database. Its automatic recovery from problems such as an OS crash, power failure, or abnormal application termination means that JDataStore has virtually zero administration. Optimized for speed, JDataStore continues to be the performance leader, and has significant performance advantages over many fast native databases. JDataStore provides the efficiency and performance required to support the evolving deployment requirements of your growing enterprise.
