

InstallAnywhere 8

The Easy Way To Target Multiple Platforms With One Installation

BENEFITS

- **Easy to use: Builds a multiplatform installation in minutes—using a powerful project wizard.**
- **Reduces development time: Creates one installation for multiple platforms and multiple languages—deploys software onto any client or server platform.**
- **Simplifies your software deployment—includes all of the platform-specific functionality you will ever need.**
- **Available in Two Editions to Meet Your Specific Development Needs – Standard and Enterprise.**

You've invested too much time and money developing your application to take short-cuts on packaging and installation. With InstallAnywhere, the industry-leading multiplatform installation-authoring solution you can:

- Reduce Development Time
- Give the Best End-User Experience
- Lower Support Costs

Reduce Development Time

InstallAnywhere is the industry leader in multiplatform software deployment with tens of millions of applications installed and configured.

- **Create one installation for multiple platforms and languages:**
 - Configure your software exactly the way you want it, every time
- **Build installations in minutes**
Six-step Project Wizard and fully graphical advanced designer allows you to create installers without coding
- **Author installations using native languages**
English, French, German and Japanese—create localized installers in up to 29 languages
- **Simplify and standardize software deployment**
Complex server software deployment and configurations are a breeze
- **InstallAnywhere Collaboration (add-on)**
Improves team development by capturing, testing, tracking, and using installation requirements throughout the development process

Give the Best End-User Experience

Installation is your customers' first impression of your product. Make it the best.

- Use custom graphics, animation and transparent images to create a user experience that matches your software's unique look and feel
- Create a single installer that behaves like a native application
- Innovative APIs allows powerful customization options so your installation has precisely the functionality you need with a unified look and feel to deliver consistent product branding

Lower Support Costs

With advanced support for popular operating systems, InstallAnywhere can help keep costs down during and after development. In addition to simplifying documentation and accelerating the QA process, InstallAnywhere helps reduce the support burden associated with complex, legacy manual installations.

InstallAnywhere 8 – What's New

- **Support for New Platforms** — Mac OS X on Intel, UNIX, Linux, and Solaris 10 added
- **Accessibility** — InstallAnywhere now makes it easy to create accessible installations that are Section 508-compliant.
- **InstallAnywhere Collaboration** — With support for InstallAnywhere Collaboration — an exclusive plug-in for Eclipse used by application developers — you can automatically capture and communicate installation requirements between application and installation developers. For a limited time, an InstallAnywhere Collaboration one-pack is included with every license of InstallAnywhere Enterprise.
- **Migration** — InstallShield MultiPlatform users can migrate to InstallAnywhere 8.0 with the help of various migration tools and services.

From Windows to Multiplatform – Macrovision's Installation Family

- **FLEXnet InstallShield Windows** — the industry-leading solution for Windows, including servers and mobile device installations
- **InstallAnywhere** — solution of choice among multiplatform installation developers
- **InstallShield & InstallAnywhere Collaboration** — enables application developers to capture, track, test and use installation requirements throughout the entire development.

InstallAnywhere

Reduce Development Time, Increase Project Quality With
Powerful Functionality!

	Enterprise	Standard
One Project - All Platforms – Easily build installations in one project for every platform you support.	✓	✓
Installers Run in Silent, Console, or GUI Modes – Run installations in silent, console, or full graphical mode.	✓	Graphics Mode Only
Localized Designer – Developers who speak English, French, German, and Japanese can author multiplatform installers using their native language.	✓	
Localized Installations – Pre-translated installation dialog panels make it easy to localize your installations.	29	9
Handle Platform-Specific Details – InstallAnywhere offers a number of actions that allow you to perform platform-specific tasks.	✓	✓
Intelligent Flexible Component-Based Installations – Installations have built-in logic to detect what's installed and react accordingly.	✓	✓
Team Development – Easy project collaboration saves development teams a lot of time.	✓	
Intuitive, Easy to Learn and Use – The intuitive integrated development interface allows you to build installations quickly and efficiently.	✓	✓
Cross Product Dependencies – Dependencies allow for the conditional installation of specific software applications based on the current system configuration.	✓	
Action Groups – Provide the ability to logically group a set of actions or panels in Pre-Install, Post-Install, Pre-Uninstall and Post-Uninstall.	✓	
Dynamic Merge Modules – Import Panels and Actions from a Merge Module into a master project as an Action Group.	✓	
Platform Support – RedHat Enterprise Server 3, RedHat Advanced Server 4, Itanium 2 for Windows, SUSE Enterprise Server 9, Solaris 10, AMD-64 for Windows, Linux, HP-UX, z/OS/OS/390 & Solaris, Mac OS X (PPC and Intel)	✓	✓
NEW! Display HTML – The Display HTML Panel allows you to display HTML from an archived file or a specific URL on a panel during the installation.	✓	✓
NEW! FLEXnet Connect Integration – Include FLEXnet Connect™ with the installation, which allows you to communicate updates and other critical information to your end users.	✓	✓
NEW! DIM Consumption – Reference Developer Installation Manifest (DIM) files created with the new InstallAnywhere Collaboration plugin.	✓	
New! InstallAnywhere Collaboration – With this plug-in for Eclipse, you can automatically capture and communicate installation requirements between application and installation developers.	✓	
NEW! Service Layer Integration – The new services layer allows you to easily add advanced functionality to your custom code actions.	✓	
NEW! Progress Bar Control – These new APIs allow you to control of the progress bar at Pre-Install, Install, Post-Install, Pre-Uninstall, and Post-Uninstall.	✓	✓
NEW! Improved Accessibility – Create installations that are Section 508- compliant with new accessibility improvement including support for screen readers, high-contrast, and mnemonics.	✓	✓
NEW! Enhanced Installation Return Codes – Debug your installation faster and more accurately with detailed status return codes.	✓	✓
NEW! Recording Response Files – Your customers no longer have to manually create response files for running silent installations.	✓	✓
NEW! Resizable Dialogs – You can now specify how large you'd like your installation dialogs to be.	✓
