

JClass® ServerViews

DYNAMIC CONTENT FOR SERVLET, J2EE AND WEB SERVICES DEVELOPMENT

Stable

Builds on our years of experience developing stable, reliable components.

Open and Portable

100% Java, supports XML, generates standard graphic and document formats like Flash and PDF.

Scalable

Designed for high-request web application environments.

Easy to Use

Visual design tools and numerous demos get you productive quickly.

Easy to Deploy

JClass ServerViews libraries are easy to add to your application server.

Superior Platform and Environment

Support

JClass products are compatible with the latest JDKs and application servers.

Superior Technical Support

All JClass products come with our premium support package, so you can keep up to date with the latest Java technology.

Proven in enterprise environments around the globe, JClass is an award-winning family of integrated Java components. JClass helps you build enterprise-class applications quickly and cost-effectively.

JClass ServerViews is a set of server-side Java components that brings professional, dynamic charts and Adobe Acrobat PDF documents from a J2EE application server to the browsers of an entire network of users. JClass ServerViews integrates with leading J2EE application servers including IBM WebSphere and BEA WebLogic.

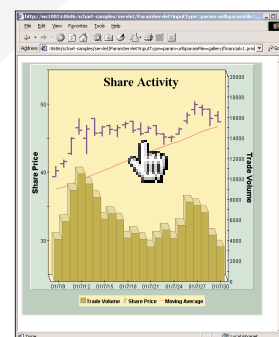

With JClass ServerViews components, you can:

- Add professional charts and documents to your Servlet, JSP, J2EE and Web Services application interfaces
- Build better applications in less time with fewer resources
- Take advantage of integration with the latest application servers and IDEs
- Focus on development related to business logic instead of infrastructure
- Leverage best of breed examples, demos, support and documentation to get going fast

JClass ServerChart

Deliver interactive charts in industry-standard formats

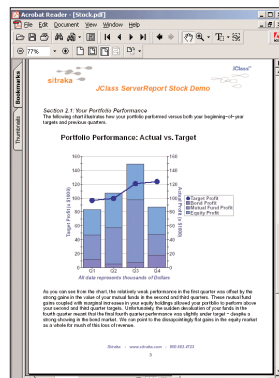

A robust and scalable Java component for server-side charting, JClass ServerChart is a 100% Java class library that uses J2EE Servlet and Java Server Pages (JSP) technologies to produce interactive graphic images from your application server that can be rendered directly in a browser rather than in an applet.

JClass ServerReport

Generate professional content that users can view and print anywhere

JClass ServerReport is a 100% Java server-side component library that dynamically generates customized Adobe Acrobat PDF documents from your J2EE server-based Java application. Provide your users with professional, high-quality custom reports that print anywhere. Unlike an add-on report-generation engine, JClass ServerReport works entirely within your J2EE application server, enabling more intelligent application load balancing and provisioning.

JClass® ServerViews

DYNAMIC CONTENT FOR SERVLET, J2EE AND WEB SERVICES DEVELOPMENT

Application Server Integration

- BEA WebLogic Server
- IBM WebSphere Application Server
- Macromedia JRun
- Oracle 9iAS
- Sun ONE Application Server
- JBoss
- Apache Tomcat

Integrated Development Environments (IDE)

- IBM WebSphere Studio Application Developer
- Borland JBuilder
- Sun ONE Studio
- IntelliJ IDEA
- IBM VisualAge for Java

Operating Systems

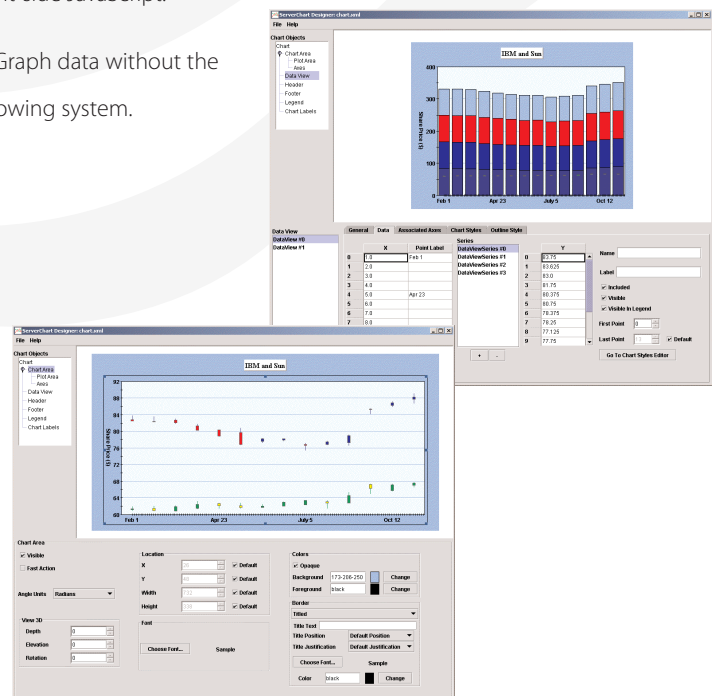

- Microsoft Windows NT/2000/XP
- Sun Solaris
- IBM AIX
- Red Hat Linux
- HP-UX

KEY FEATURES

JClass ServerChart

- **Industry-standard graphics formats**—Generate charts in browser-friendly formats such as Macromedia Flash, SVG, GIF, JPEG and PNG.
- **Charting types**—Choose from multiple business and scientific chart types, including the new Polar, Radar and Area Radar charts.
- **Web Services ready**—Describe and pass charts as XML, load XML formatted data and process charts using open XML-based technologies.
- **New easy-to-use visual Chart Design tool**—Design the appearance and behavior of a chart with intuitive WYSIWYG tool and save XML chart templates for use at run time.
- **Configurable properties**—More than 180 configurable properties enable you to customize chart styles, chart positioning, labels, and more.
- **Integration with JClass ServerReport**—Generate a chart and include it as part of a PDF file generated by JClass ServerReport.
- **HTML image map tag generation**—Automatically provide drill-down interactivity without writing any client-side JavaScript.
- **Headless operation**—Graph data without the use of a display or windowing system.

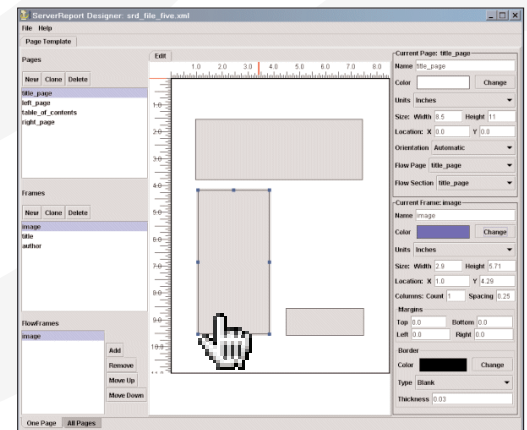

JClass® ServerViews

DYNAMIC CONTENT FOR SERVLET, J2EE AND WEB SERVICES DEVELOPMENT

JClass ServerReport

- **Adobe Page Description Format (PDF)**—Deliver professional, time-sensitive documents in PDF, an industry-standard format that users can view and print anywhere.
- **XML and XSLT support**—Control document creation with flexible page geometry (e.g., inserting images and tables).
- **Endless formatting and design options**—Use landscape or portrait orientations, running headers and footers, automatic page numbering, multiple columns, text alignment, line and paragraph spacing, indents and tab stops, fonts, colors, shape drawing and more.
- **Visually design sophisticated page templates**—WYSIWYG tool makes it easy to customize default templates or create new templates, without manually editing XML code; new PDF preview!
- **Global language support**—16-bit Unicode font and character set support and PDF font embedding / compression enable you to generate PDF documents containing, for example, Asian text and fonts.
- **Flexible import options**—Import GIF, JPG and EPS images.
- **Headless operation**—Generate documents without the use of a display or windowing system.
